

Senior Software Engineer

Company Profile

LeoTel Software Systems is a reputable software consultancy and systems house with an enviable record of successfully delivering software and systems to customers in the UK and internationally.

LeoTel Software Systems provide professional software engineering services across a range of market sectors, from traditional vertical markets such as telecoms and utility metering to emerging market sectors such as biometric systems and medical devices encompassing a broad range of applications from embedded software and product development to distributed enterprise systems.

Our customers rely on the experience and domain knowledge of the LeoTel Software Systems engineering team members to maintain their commercial advantage in meeting challenging product and system delivery or deployment targets.

Our business is driven by elite software engineers who care about what they are doing and take pride in a job well done, often using their own initiative to meet deadlines and finding solutions to problems that have stumped other engineers. This mindset we believe is important to ensuring continued and sustained success and makes us the best at what we do.

Job Role

As part of the senior engineering team you will be responsible for the delivery, development and maintenance of real-time object oriented software primarily for customer driven projects and occasionally for internal LeoTel Software Systems product or systems.

The successful individual, after a period of successful customer project delivery, will have scope to lead and manage projects initially with a small complement of software engineers.

The position is primarily based at our Stevenage office but may also involve working directly at the customer's facility from time to time.

Core Skills

The following are all key requirements for this position:

- A strong academic background with a degree in engineering, physics, computer science or mathematics from a reputable university
- Five years or more experience in a commercial software engineering capacity
- Hard working motivated self starter with the ability and confidence to manage even the most complex of projects
- Experience of developing real time or embedded software using C/C++
- Experience or knowledge of RTOS (VxWork, Embedded Linux, etc)
- Object Oriented Methodology

Additional Skills

Any of the following would be an advantage:

- Experience of developing software using: C#, CORBA, Databases, Java, Perl,
- TCP/IP, UML and/or Web Technologies (e.g. APACHE, SOAP, SSL, TOMCAT, XML).
- Experience of developing software for any of the following platforms: VxWorks, QNX, pSOS, UNIX API (e.g. Solaris, HPUX, *BSD, Linux), and/or Win32.
- Experience of developing software for any of the following microcontrollers: ARM, ATMEL, PIC, PowerPC, TI, AD, and/or X86.

Remuneration

- Salary negotiable dependent on experience
- Relaxed professional work environment
- Flexible working hours
- Competitive bonus scheme linked to personal and project achievement and overall company performance
- Health Insurance
